Stock Dashboard

Janav Sama, Jacob Jawharjian

This dashboard is a user and beginner friendly platform for users to learn about stocks. It starts off by prompting the user to enter the company of their choice and choose the date of the graph to be displayed. The graph shows data from 2019. Additionally, using tabs, we were able to include another graph: the recommendation graph. Based on several different factors, this graph gives users a general idea on the position of the stock and what trade options the user can pursue.
